

PPU MINARECH 
PARTNER PRE POVRCHOVÚ ÚPRAVU

SIGMACOVER™ 350

Dvousložkový základní nebo vrchní nátěr – víceúčelové použití

- Základní nátěr tolerantní vůči přípravě povrchu vhodný pro exponované plochy, paluby, superkonstrukce a suché nákladní prostory
- Nezávisle certifikován pro přepravu suchých potravin
- Dobrá odolnost proti otěru
- Kompatibilita s různými typy starých nátěrů
- Žádná indukční doba – možnost okamžité aplikace
- Rychleschnoucí nátěrová hmota - snižuje prostoje a urychluje vrácení do provozu
- Rychlo vytvrduje s možností pretierania až jedného roku
- Lesklý povrch – jednoduchý na čistenie
- Obrovské množstvo farebných odtieňov podľa mnohých priemyselných noriem.
- Súčasťou systému **SIGMACARE® onboard maintenance service**

SIGMACOVER™ 350

Two pack primer/finish – versatility of use

Versatility of use – proven success

The SIGMACOVER 350 primer/finish has proven to be the most versatile member of the SIGMACOVER product range of recoatable epoxy systems in new-build, dry dock applications as well as onboard maintenance. The product is successfully used on decks, interiors, superstructures, topsides and in dry cargo holds.

The SIGMACOVER 350 primer/finish is now available in an extended color range, including tintable base L and Z from dispenser, whilst worldwide availability and service is assured through our color network centers. In addition, by combining the primer and finish into one product, the system allows single product application and also reduces inventory levels. Therefore, this coating is the logical choice for onboard maintenance of all above-water areas including dry cargo holds.

The SIGMACOVER 350 primer/finish is fully supported by the SIGMACARE onboard maintenance crew support pack, which provides training and advice on the application and lifting the standards of ship onboard maintenance.

Surface-tolerant – ideal for onboard maintenance

Surface tolerance is a key feature of the SIGMACOVER 350 coating. Whilst at sea, it is often impossible to prepare rusty surfaces to high standards of surface preparation. The coating has been designed for use where surface preparation is not optimal. It is suitable for use on clean, aged intact coatings with minimal surface pre-treatment. This added versatility ensures good adhesion to marginally prepared surfaces, thus providing the required protection in service and allowing ship operators to better utilize their maintenance budgets.

Abrasion-resistant - suitable for dry cargo holds

The SIGMACOVER 350 coating is abrasion resistant, and a selected range of colors offers additional benefits for use in dry cargo holds, such as an independent certification for the carriage of dry foodstuffs. It is also possible to transport paper and forestry products in holds as the product is aluminum free.

Features

- Two pack epoxy primer/finish coat for decks, interiors, superstructures, topsides and in dry cargo holds
- Independently certified for the carriage of dry foodstuffs
- Fast curing and year round application
- Excellent brush/roller application properties
- Compatible with existing aged coatings
- Suitable for use in new-build, dry dock applications and onboard maintenance.

Benefits

- Reduced complexity through simplified product range – less inventory, reduced administration time
- Multi-purpose usage making it ideally suited for onboard maintenance
- No induction time – start painting jobs faster
- Quick drying - fast return to service
- Glossy finish / easy to clean – reducing downtime
- Available in any color of choice supplied through our global color network centers
- Supported by SIGMACARE crew support and training package

For versatility of use, good abrasion resistance, ease of use for onboard maintenance – choose the sigmacover 350 primer/finish.
